20

4. Translate the following passage into Swahili:

Air, water and food were essential for life. Although medical, scientific and legal efforts were made to make the last two safe; only recently, an attempt has been made to assure the air safe as well. Smoke from industries, dwellings and vehicles was allowed to enter our noses, though it used to hurt our health. The

creation of smoke-free zones is quite recent, because increase in deaths owing to polluted air has been reported. If these efforts are made with earnest and dedication, the result would be beneficial to the humanity. The world could hope for a better and healthy life. In fact, we need a system of controlled growth and development. 20
