S. No. of Question Paper : 7766

Unique Paper Code : 2491101

F-1

Name of the Paper : Molecules of Life (DC 1.1)

Name of the Course : B.Sc. (Hons.)/Bio-Chemistry

Semester : I

Duration : 3 Hours

Maximum Marks : 75

*(Write your Roll No. on the top immediately on receipt of this question paper.)*

Attempt *Five* questions in all.

Question No. 1 is compulsory.

Use of scientific calculator/Log tables may be allowed.

1. (A) Fill in the blanks :

- (i) The active co-enzymatic form of folate is.....
- (ii) A molecule with  $n$  chiral centers can have ..... stereoisomers.
- (iii) .....and.....are essential fatty acids in humans.
- (iv) Nucleic acids absorb maximally at.....nm.
- (v) .....is an omega ( $\omega$ )-3 series of fatty acid.
- (vi) .....is an optically inactive amino acid found in proteins.

(B) Give an example of any *ten* of the following :

- (i) A lipid with signal transducing activity.
- (ii) A methyl donor in biological reactions.
- (iii) An amino acid with two asymmetric carbon atoms.
- (iv) A deoxy hexose.
- (v) A nucleotide containing co-enzyme.
- (vi) A complex glycosphingolipid.
- (vii) A plant sterol.
- (viii) An exoskeletal polysaccharide.
- (ix) Mirror image of  $\alpha$ -D glucose.
- (x) A standard amino acid that links the polypeptide chains covalently.
- (xi) Provitamin A.
- (xii) Most abundant polysaccharide in the biosphere.

5

(C) Indicate whether each of the following statement is true *or* false :

- (i) Cholesterol is exclusively found in bacterial cell membrane.
- (ii) All linear polymers of D-glucose can be digested by humans.
- (iii) The sweetness of honey gradually decreases at high temperature.
- (iv) Nucleosides are more soluble in water than the corresponding bases.
- (v) Z-DNA is a right handed helix.

5

(D) (a) Indicate whether the following pairs of sugars are enantiomers, epimers, diastereomers or anomers :

- (i)  $\alpha$ -D glucose and  $\beta$ -D glucose
- (ii) D-glucose and D-talose
- (iii) D-galactose and D-mannose
- (iv) L-fructose and D-fructose

(b) Which of the following are membrane lipids ?

- (i) Cholesterol
- (ii) Choline
- (iii) Cerebrosides
- (iv) Glycerol
- (v) Phosphoglycerides

3

2. (A) Compare the following pairs :

- (i) t-RNA and m-RNA
- (ii) Chitin and cellulose
- (iii) Plant and animal sterols
- (iv) Configuration and conformation
- (v) Phospholipid and neutral fat

10

P.T.O.

(B) Define the following :

- (i) Zwitterion
- (ii) Homoglycans
- (iii) pKa
- (iv) Hydrogen bond

4

3. Provide a logical explanation for each of the following observations :

- (i) Oleic acid has a lower melting point than Elaidic acid.
- (ii) Fructose on reduction gives a mixture of mannitol and sorbitol.
- (iii)  $pK_{a_1}$  of glycine is lower than the pKa of acetic acid.
- (iv) Alkali denaturation of DNA is preferred over acid denaturation.
- (v) Arachidonic acid is not considered as an essential fatty acid in animals.
- (vi) DNA exhibits hyperchromicity upon denaturation.
- (vii) Glucose is not stored in a monomeric form.

14

4. Draw the structures of (any 4) :

- (i) Phosphatidyl choline (PC)
- (ii) Aspartic acid at pH 11.0
- (iii) Trehalose
- (iv) Cyclic AMP

- (v) 4-Thiouridine
  - (vi) Cholesterol
  - (vii) Lactose
  - (viii) Sialic acid
  - (ix) Tyrosine
  - (x) G-C base pair
  - (xi) Histamine
  - (xii) Platelet Activating Factor (PAF)
  - (xiii) L-ascorbic acid (vitamin C)
  - (xiv) Glucuronic acid
  - (xv) Retinol
  - (xvi) Ornithine
  - (xvii)  $\alpha$ -methyl D fructofuranoside
  - (xviii) N acetyl glucosamine 14
5. (A) Write short notes on any *three* of the following :
- (i) Role of vitamin C in humans
  - (ii) Storage polysaccharides
  - (iii) Proteoglycans
  - (iv) Waxes 12
- (B) Name *two* non-protein amino acids. 2
- P.T.O.

6. (A) (i) What is buffer ?

(ii) Calculate the pH of a dilute solution that contains molar ratio of acetate to acetic acid of :

(a) 2 : 1 and

(b) 1 : 3 ( $pK_a = 4.76$ ).

(iii) Which of these compounds would be the best buffer at pH 5 and why ?

(a) Formic acid ( $pK_a = 3.8$ )

(b) Acetic acid ( $pK_a = 4.76$ )

(c) Ethyl amine ( $pK_a = 9.0$ )

5

(B) An equilibrium mixture of  $\alpha$ - and  $\beta$ -D galactose has a specific rotation of  $+80.2^\circ$ . The specific rotation of pure  $\alpha$ -D galactose is  $+150.7^\circ$  and that of pure  $\beta$ -D galactose is  $+52.8^\circ$ . Calculate the proportion of  $\alpha$  and  $\beta$ -D galactose in the equilibrium mixture.

3

(C) Describe the role of either eicosanoids or carbohydrates as informational molecules. 6

7. (A) Water is a reactant in many biochemical reactions. Defend this statement with suitable examples.

4

(B) What happens when ?

(i) Tristearin is treated with NaOH in the presence of alcohol.

(ii) Cytosine is treated with nitrous acid

(iii) RNA is treated with alkali.

6

(C) Which of the following sugars will mutarotate and why ?

(i) Rhamnose

(ii) Glucitol

(iii) Glucosamine

(iv) Fructose

(v) Xylose

(vi) Gluconic acid

(vii)  $\beta$ -methyl galactoside

(viii) Mannose

(ix) Allose

4

8. (A) Indicate the symptoms associated with vitamin A deficiency and hypervitaminosis. 4

P.T.O.

- (B) Give the systematic and common name of the following fatty acids : 3
- (i) 18 : 3 $\Delta$ 6, 9, 12
  - (ii) 20 : 0
  - (iii) 16 : 1 $\Delta$ 9
- (C) Highlight the salient features of the Watson Crick model of DNA. 5
- (D) Give *one* significant contribution of the following investigators : 2
- (i) James Lind
  - (ii) Haworth
